

Brightness and colour temperature

Brightness (luminous flux)

The light flux (also known as brightness) emitted by a bulb is expressed in **lumen (lm)**.

Traditional incandescent or halogen light bulbs only indicated electric power in **watt (W)**; watts actually indicate energy consumption and not the real quantity of light emitted.

Watt consumption being equal, modern light bulbs (using the LED technology or other low consumption technologies) have a much higher brightness.

As an indication, the table here below shows the correspondence between **halogen bulbs** and any modern bulb whose brightness is expressed in **lumen**.

A light source having luminous flux equal to	10 lumen	20 lumen	50 lumen	70 lumen	100 lumen	150 lumen	200 lumen	250 lumen	350 lumen	500 lumen
Replaces a halogen bulb of	0,5 watt	1 watt	3 watt	4 watt	6 watt	9 watt	12 watt	15 watt	20 watt	30 watt

Colour temperature

Colour temperature is a characteristic of visible light and is expressed in **kelvin (K)**.

Any light source has a distinctive colour temperature ranging from warm (such as a candle, 1000 K) to cool (Xenon lamps, 6200 K).

Warm lights have a yellow/orange shade and make ambients more comfortable to the detriment of the colour fidelity of the surrounding objects.

Cool lights - over 5300 K - result in bluish tones.

Traditional incandescent bulbs have a warm light (about 2900 K) but cooler lights are used to light up work areas (3500 K to 6000 K):

IP protection degree

Ex. IP67:

6 = complete protection against ingress of dust.

7 = Ingress of water is possible when the enclosure is immersed in water under defined conditions of pressure and time.

IP	X	Y
Code breakdown (International Protection)	X = solid particle protection (0-6)	Y = liquid ingress protection (0-8)
	0 No protection	0 No protection
	1 Protected against ingress of solid particles > 50-mm Ø	1 Protection against vertically falling drops
	2 Protected against ingress of solid particles > 12-mm Ø	2 Protection against dripping water when tilted at any angle up to 15° from the vertical
	3 Protected against ingress of solid particles > 2.5-mm Ø	3 Protection against water falling as a spray at any angle up to 60° from the vertical
	4 Protected against ingress of solid particles > 1-mm Ø	4 Protection against water splashing against the enclosure from any direction
	5 Protection against ingress of dust (dust protected)	5 Protection against water jets
	6 Complete protection against ingress of dust (dust tight)	6 Protection against powerful water jets
		7 Protection against temporary immersion in water
		8 Protection against continuous immersion in water

Neon Light flexible LED strip, even light

IP68

2-m bars. They can be very easily **cut to measure** keeping into account that the master contact is placed every 50 cm (marked on the bar).

Yet the bar can also be cut every **10 or 5 cm** (thus avoiding waste) being extremely careful in the process.

This technology delivers **even and diffused light**. For interior and exterior applications.

Night Eye high-beam LED light

LED **IP66** **NEW POWER**

Characteristics:

- Made of white painted aluminium + ABS + stainless steel base.
- **13 x CREE** genuine high-quality **LEDs**, 50,000 hour lifetime.
- Light can be removed from the base thanks to the 2-m extension cable.
- Fitted with watertight ON-OFF switch and watertight end plug, for either external or built-in installation.

Advantages:

- **IP66** watertight
- 50,000 hour LED lifetime, as little as 7.5% performance loss after 20,000 hours.
- High power, low consumption.

Classic electrical spot light made of stainless steel

IP67

Mirror-polished stainless steel body, 100% watertight, 350° horizontal and 55° vertical rotation. Two speeds. 100W + 90W H4 halogen double-filament bulb (spot + flood).

It can be connected to 3 optional controls (independent or combined) for the desired configuration:
 1) Joystick-operated bridge control (to be connected to the lighthouse via a phone cable), 4.5-m cable included, 10-m cable to be purchased separately.
 2) Wireless bridge control (power the panel and it will interface wireless to the lighthouse).
 3) Traditional radio remote control with bracket for mounting on the bridge.

LED electric exterior spotlight

Body: diecast aluminium coated in white high-resistance and anti-corrosion resins. 100% watertight, 2-speed 355° horizontal rotation, 50° vertical rotation. CREE high-quality LED unit. 54W consumption corresponding to a traditional 100 W bulb.

It can be connected to 3 optional controls (independent or combined) for the desired configuration:
 1) Joystick-operated bridge control (to be connected to the spotlight via a phone cable), 4.5-m cable included, 10-m cable to be purchased separately.
 2) Wireless bridge control (power the panel and it will interface wireless to the spotlight).
 3) Traditional radio remote control with bracket for mounting on the bridge.
